**Subject**  
NTS-3000

Dear Mr. Widomski,

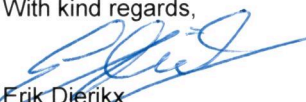

VSL is happy to use the ELPROMA NTS-3000 ntp server.

The main advantages of this ntp-server are the ability to directly synchronize to an 5071 Cs clock and the capability to insert a leapsecond in the server by means of a leapsecond text file. These two features are usually not offered by commercially available ntp servers, but these features make this server very useful for operation in a national metrology institute.

Furthermore we have greatly appreciated the service and personal care of the people at ELPROMA. In the purchase process, there has been a good and detailed communication about specific requirements in our laboratory and the ELPROMA ntp experts have personally taken care of the correct installation in the laboratory.

For this, we are very much satisfied with the services of ELPROMA.

With kind regards,

  
Erik Dierikx  
VSL
